Oracle Installation

Installation procedure:

- 1) Install Oracle Database Express Edition (XE) Release 11.2.0.2.0 (11gR2)
- 2) Download Oracle SQL Developer
- 3) Unlock the HR user
- 4) Setup connection in Oracle SQL Developer

1) Install Oracle Database Express Edition (XE) Release 11.2.0.2.0 (11gR2)

Download Oracle Express Edition (XE) Release 11.2.0.2.0 (11gR2) from the following link:

<https://www.oracle.com/technetwork/database/database-technologies/express-edition/downloads/xeprior-releases-5172097.html>

Accept the Licence Agreement & Download the appropriate version for your operating system.

18c XE Download

Create an account if you do not already have one. Enter your account information to start the download.

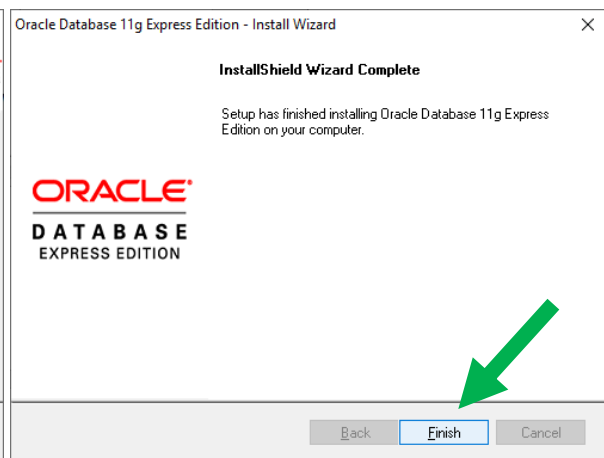

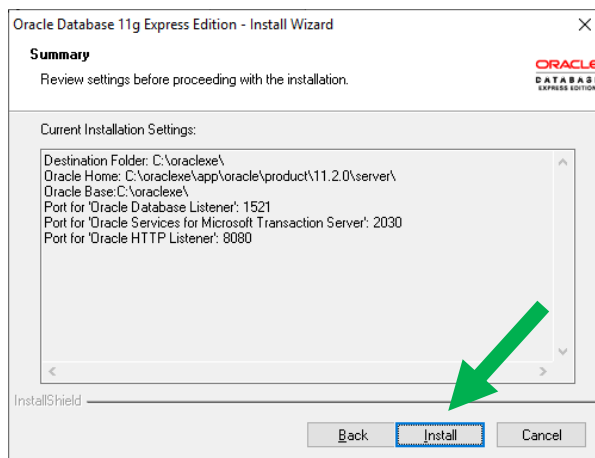

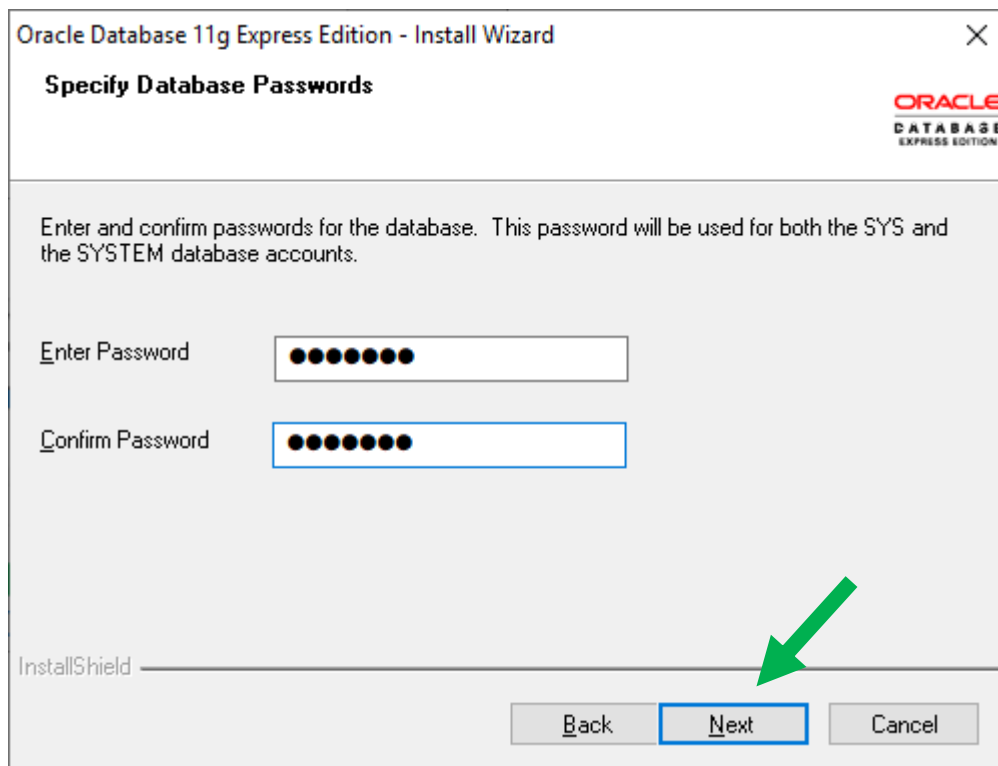

When the download is completed, extract the contents of the .zip file and run the “**Setup.exe**”. Then, follow the steps below indicated with the green arrows.

Specify a **password** to access the Oracle databases. I recommend using:

cmpg

The installation of Oracle Express Edition (XE) is now complete.

2) Download Oracle SQL Developer

Download Oracle SQL Developer (latest version with JDK) from the following link:

<https://www.oracle.com/tools/downloads/sqldev-downloads.html>

Accept the Licence Agreement & Download the appropriate version for your operating system.

The image consists of two screenshots of the Oracle SQL Developer 20.4.1 Downloads page. The top screenshot shows the page with the download links for Windows 64-bit and 32-bit versions. A green arrow points to the 'Download (423 MB)' link for the 64-bit version. The bottom screenshot shows the same page with a modal box overlaid, requiring the user to accept the Oracle License Agreement. A green arrow points to the 'Download sqldeveloper-20.4.1.407.0006-x64.zip' button in the modal box.

SQL Developer 20.4.1 Downloads

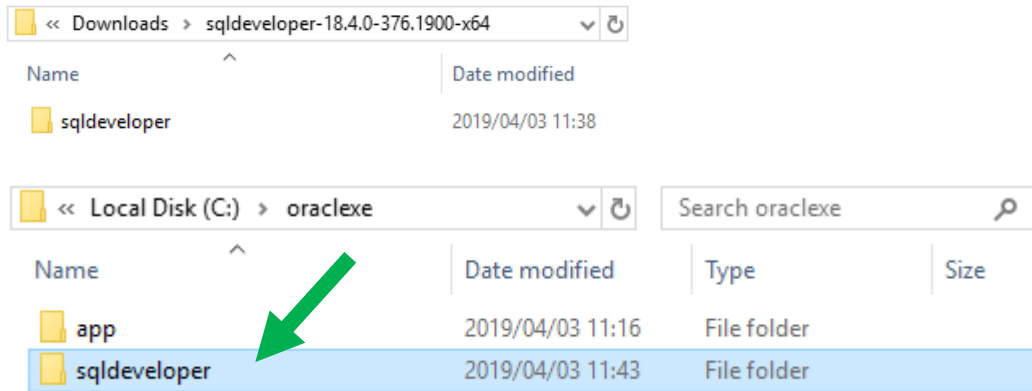

Version 20.4.1.407.0006 - February 22, 2021

- Release Notes
- Documentation

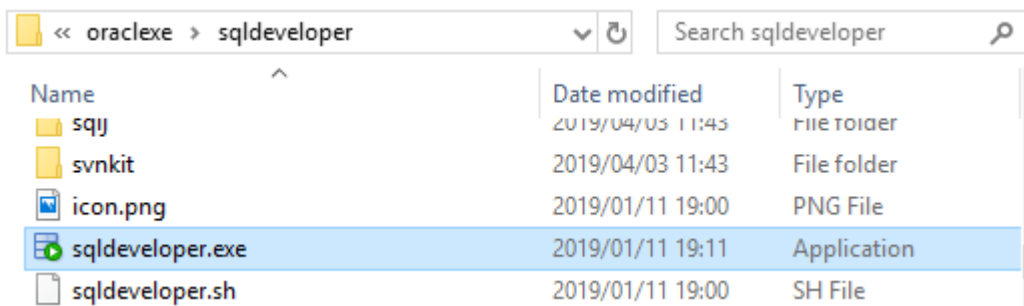

Platform	Download	Notes
Windows 64-bit with JDK 8 included	Download (423 MB)	- MD5: 73e7180ec8b494868c2fce4d99114630 - SHA1: 0ad1cc75a28c0ac3eb9797bfc167bfc6fea3212e Installation Notes
Windows 32-bit/64-bit	Download (432 MB)	- MD5: 041709f01de2c6d176f37132089b61b8 - SHA1: df90320a3a6e15df90fafb9d0c603317f3a68b84 Installation Notes - JDK 8 or 11 required

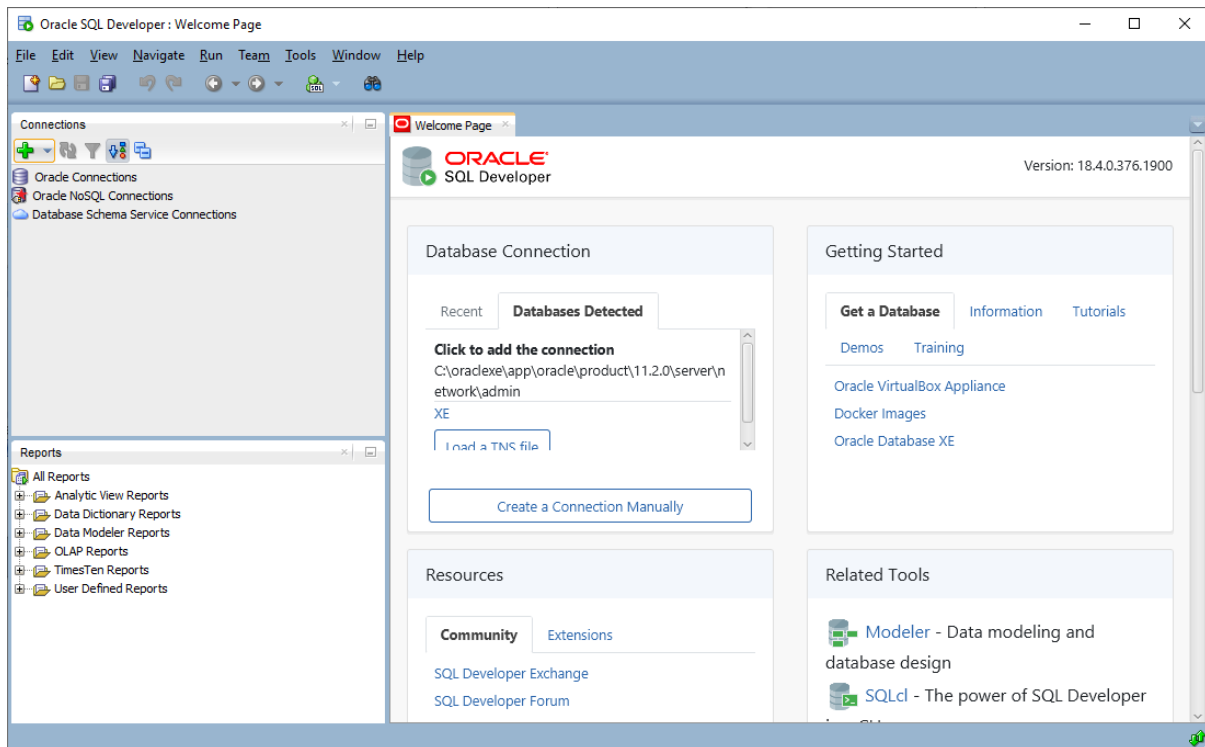

https://www.oracle.com/webapps/redirect/signon?nexturl=https://download.oracle.com/otn/java/sqldeveloper/sqldeveloper-20.4.1.407.0006-x64.zip

When the download is completed, extract the contents of the .zip file and (it is recommended to) move the “sqldeveloper” folder to the installation directory of the Oracle Express Edition (XE) so all the Oracle components are neatly organized together. The default location is “C:\oraclexe\”

To open the Oracle SQL Developer environment, navigate to this folder “C:\oraclexe\sqldeveloper” and run the “*sqldeveloper.exe*”.

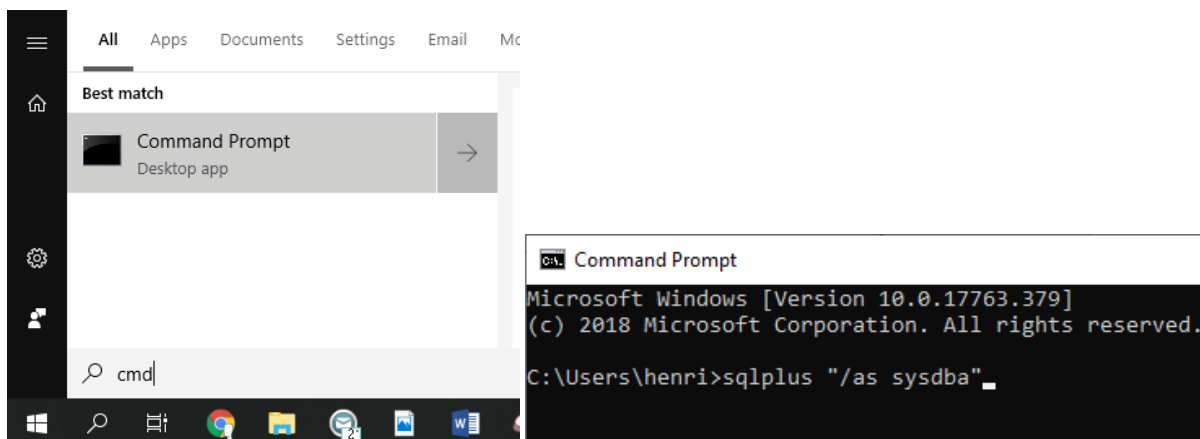

The Oracle SQL Developer environment is working successfully and a NEW connection must be set up to use this environment for the purposes of this course. You will get the following error “... the account is locked” if you try to create a new connection before unlocking the HR account in the steps to follow.

3) Unlock the HR user

To unlock the HR user, open the Command Prompt and type the following: **sqlplus “/as sysdba”** and then press enter.

Once you have the SQLPLUS open, type the following to unlock the HR user and change the password to “cmpg”: **alter user hr identified by cmpg account unlock;** and press enter.

```
Command Prompt - sqlplus "/as sysdba"
Microsoft Windows [Version 10.0.17763.379]
(c) 2018 Microsoft Corporation. All rights reserved.

C:\Users\henri>sqlplus "/as sysdba"

SQL*Plus: Release 11.2.0.2.0 Production on Wed Apr 3 12:12:25 2019

Copyright (c) 1982, 2014, Oracle. All rights reserved.

Connected to:
Oracle Database 11g Express Edition Release 11.2.0.2.0 - 64bit Production

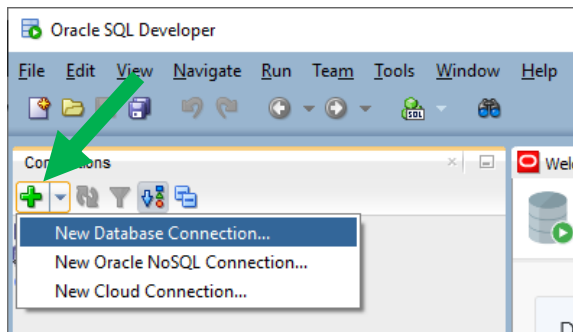

SQL> alter user hr identified by itrw311 account unlock;

User altered.
SQL> _
```

The HR account will now be unlocked and a NEW Connection can be set up in Oracle SQL Developer.

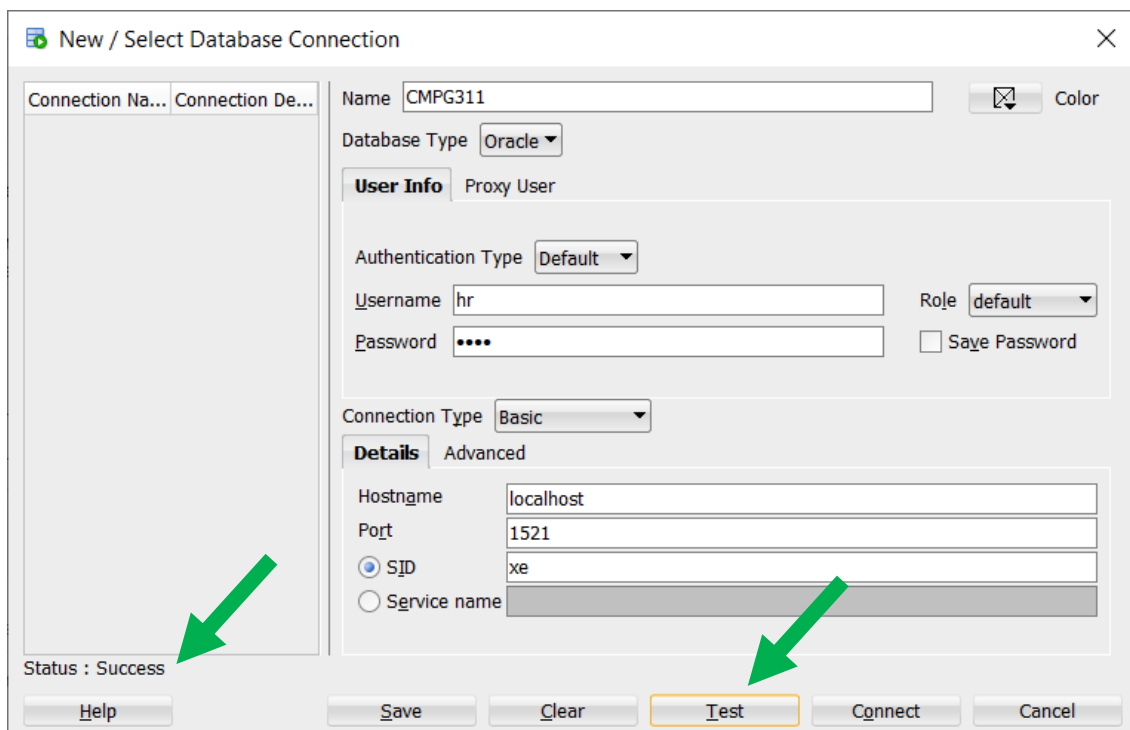

4) Setup connection in Oracle SQL Developer

To setup a NEW connection, open Oracle SQL Developer and click on the green + sign in the left-hand corner of the screen as illustrated below.

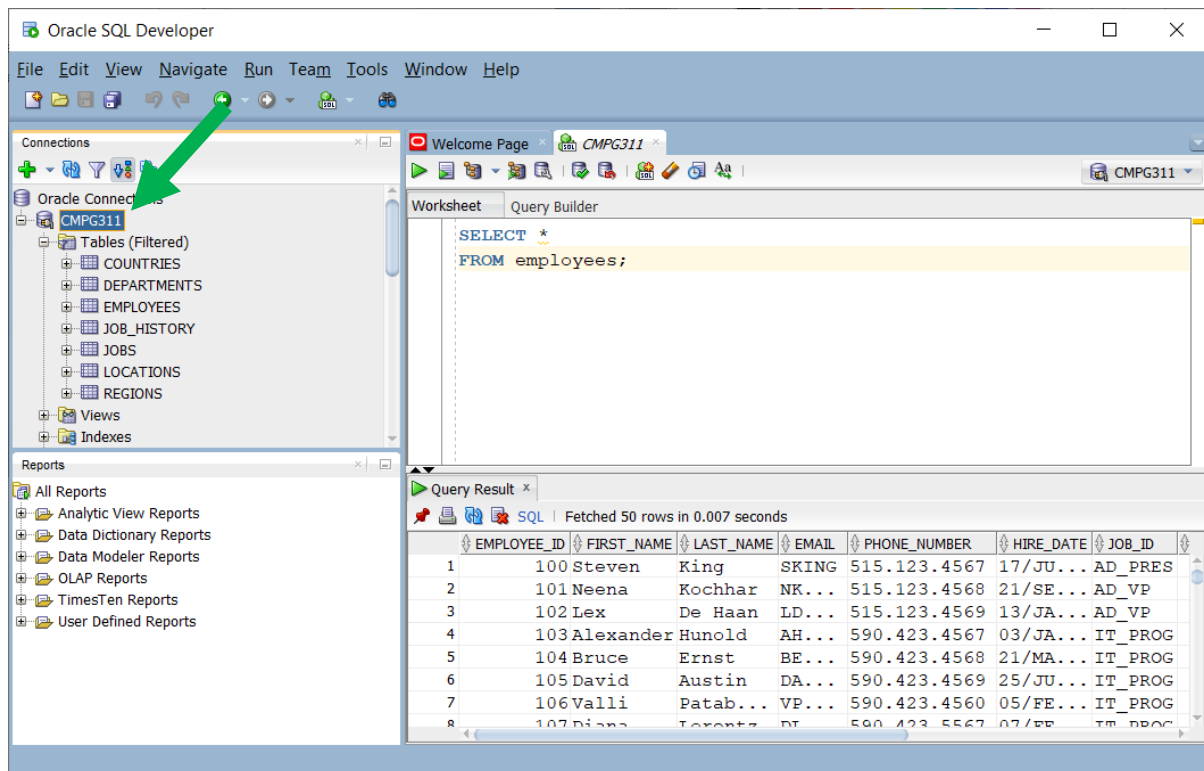

Enter the following information to create the NEW connection:

Connection Name: **CMPG311**
Username: **hr**
Password: **cmpg**
Role: **default**
Connection Type: **Basic**
Hostname: **localhost**
Port: **1521**
SID: **xe**

Click on test to see whether your connection is a success. If you receive, the message *“does not recognize listener”* or *“listener not found”* you must open the command prompt and type to following to start the listener: **lsnrctl start** and press enter. If it says, *“does not recognize SID”* type the following in the command prompt: **set oracle.sid=xe** and press enter. When the test is successful you can click on connect and start writing SQL code.

Your Oracle SQL Developer should have the connection **CMPG311** with all the tables as illustrated below and be able to execute SQL statements.

Congratulations, you have completed the setup process, I hope you enjoy working with Oracle!
