BACK END MARK SHEET

Group Name:		PROVISIONAL MARK
Student Numbers:		
Assessor:		
Moderator:		
		Mark (X/350): 0
		Perc %: 0

Criteria	Sub-Criteria	Description	Weight	Maximum	Mark	Total
Functionality				90		0
	User Management	Implimentation of User Registration, Login, and Logout.	2	10		
	Data Management	Efficient data handling from storage, retrieval, processing, and maintainance to ensure data integrity.	2	10		
	Error Handling	Error Handling for API requests.	1	10		
	Authentication	Secure API Endpoints with Authentication mechanims (e.g. JWT/OAuth).	1	10		
	Endpoints	CRUD Endpoints for main entities.	2	10		
	Security	Authentication Tokens and basic authentication checks (e.g. role-based access control).	1	10		
Code Quality				30		0
	Architecture	Clear and Structured API architecture using RESTful Principles that seperates concerns between API endpoints and Business Logic.	1	10		
	Coding Standards	Consistant naming and HTTP method usage, alongside concise API documentation.	1	10		
	Testing	Unit Tests for Endpoints convering different scenarios, as well as integration tests to ensure API functionality across components.	1	10		
Performance				30		0
	Response Time	Optimisation of responsetimes for CRUD operations.	1	10		
	Optimisation	Efficient Database Queries and Indexing.	1	10		
	Scalability	Load Testing and considerations for handling concurrent API requests.	1	10		
Deployment				40		0
	CI/CD	Automated CI/CD pipelines for building, testing, and deploying the Back-End, with version control and tagging.	1	10		
	Monitoring	Monitoring of API Performance metrics (e.g. response time, error rates, etc.)	1	10		
	Logging	Implimentation of logging for API requests and errors.	2	10		
Innovation				100		0
	Must Have	Refer to MoSCoW in documents.	4	10		
	Should Have		3.5	10		
	Could Have		2.5	10		
	Won't Have		-10	10		
Documentation				60		0
	API Documentation	Comprehensive documentation of API endpoints using tools like Swagger/OpenAPI,	2	10		
		Alongside a description of each endpoint, including parameters, request/response examples, and possible error responses.				
	Usage Documentation	README.md File detailing howto use and integrate with the API, as well as setup instructions for dev's to run Back-End locally.	2	10		
	Technical Documentation	Documentation explaining the implimentation of all aforementioned criteria, alongside schemas and diagrams.	2	10		

#VALUE!
