FULL-STACK MARK SHEET

Group Name:		PROVISIONAL MARK	
Student Numbers:		Mark (X/700):	0
Assessor:		Perc %:	0
Moderator:			

RE: BACK-END						
Criteria	Sub-Criteria	Description	Weight	Maximum	Mark	Total
Functionality				120		0
	User Management	Implementation of User Registration, Login, and Logout.	2	10		
	Data Management	Efficient data handling from storage, retrieval, processing, and maintainance to ensure data integrity.	2	10		
	Error Handling	Error Handling for API requests.	2	10		
	Authentication	Secure API Endpoints with Authentication mechanims (e.g. JWT/OAuth).	2	10		
	Endpoints	CRUD Endpoints for main entities.	2	10		
	Security	Authentication Tokens and basic authentication checks (e.g. role-based access control).	2	10		
Code Quality				30		0
	Architecture	Clear and Structured API architecture using RESTful Principles that seperates concerns between API endpoints and Business Logic.	1	10		
	Coding Standards	Consistant naming and HTTP method usage, alongside concise API documentation.	1	10		
	Testing	Unit Tests for Endpoints convering different scenarios, as well as integration tests to ensure API functionality across components.	1	10		
Performance				10		0
	Optimisation	Optimisation of response times for CRUD operations, efficient Database Queries and Indexing.	0.5	10		
	Scalability	Load Testing and considerations for handling concurrent API requests.	0.5	10		
Deployment				40		0
	CI/CD	Automated CI/CD pipelines for building, testing, and deploying the Back-End, with version control and tagging.	1	10		
	Monitoring	Monitoring of API Performance metrics (e.g. response time, error rates, etc.) using a dashboard or write to file.	1	10		
	Logging	Implementation of logging for API requests and errors using a dashboard or write to file.	2	10		

FRONT-END						
Criteria	Sub-Criteria	Description	Weight	Maximum	Mark	Total
User Interface				30		0
	Visual Appeal	UI is clean, intuitive, and aesthetically pleasing.	1	10		
	Layout and Structure	Proper layout with clear organisation of content, alongside a responsive design.	1	10		
	Usability and Structure	Easy to navigate inteface, clear call-to-action buttons, and interactive elements	1	10		
Interactivity				30		0
	Feature Implementation	All interactive elements function as expected, without issues.	1	10		
	Form Validation	Proper client-side validation with clear error messages when needed. (e.g. empty fields, incorrect formats)	1	10		
	Smooth Interaction	Interactive elements are smooth without noticeable delays and bugs (hover effects, animations, etc)	1	10		
Code Quality				30		0
	Structure & Modularity	Code is organised into logical, reusable components following standard conventions and practices.	1	10		
	Readability	Clean code following consistant coding standards	1	10		
	Code Efficiency	Avoids redundancy and uses efficient, optimal techniques (e.g. minimal DOM manipulation, CSS selectors)	1	10		
Performance				30		0
	Loading Speed	Loads quickly with optimised assests (e.g. images, CSS, JavaScript). No significatn delays in page loading.	1	10		
	Optimisation	Minimised HTTP requests, compressed images, lazy loading, optimised CSS/JS files to reduce size and improve speed.	1	10		
	Smooth Performace	No lag or performance bottlenecks in user interactions. Runs smoothly on browsers.	1	10		
Accessibility				30		0
	Keyboard Navigation	The app is fully navigable using the keyboard with focus states visible for all interactive elements	1	10		
	Semantic HTML	Proper use of HTML elements for accessibility (e.g. screen reader support)	1	10		
	Contrast & Visual	Sufficient color contrast for text and background. Alt text for images, accessible forms, and readable fonts.	1	10		

FULL-STACK						
Criteria	Sub-Criteria	Description	Weight	Maximum	Mark	Total
				100		
	Must Have		4	10		

Accountability	Should Have		Refer to MoSCoW	3.5	10		0
	Could Have			2.5	10		
	Won't Have			-10	10		
Innovation					60		0
	Creativity	Creative problem solving and implementation within project.		2	10		
	Quality	Proof of quality code, lines written, and application.		2	10		
	Complexity	Proof of complex problem solving		2	10		
Documentation					90		0
	API Documentation	Comprehensive documentation of API endpoints using tools like Swagger/OpenAPI, Alongside a description of each endpoint, including parameters, request/response examples, and possible error responses.		3	10		
	Usage Documentation	Document detailing how to use both the Back-End and Front-End from a Developer and User's point of view.		3	10		
	Technical Documentation	Documentation explaining the implementation of all aforementioned criteria, alongside schemas and diagrams. Use the criteria such as Functionality, Code Quality, Performance, Deployment for both Front- and Back-End as headings in your document		3	10		
Presentation					100		0
	Organisation and Flow	Presentation is well-structured, with clear introduction, demo, and conclusion. Sections flow logically.		1	10		
	Clarity of Key Points	Key points are communicated clearly without confusion or unnecessary detail.		1	10		
	Feature Explanation	Thorough explanation of app features and how they solve the problem and add value to user experience		1	10		
	Technical Depth	Clear explanation of technical choices made (Framework, libraries, architecture) with adequate detail.		1	10		
	Team Coordination	Team works seamlessly together with smooth transitions between presenters and no overlaps or awkward pauses.		1	10		
	Equal Contribution	All team members contribute equally to the presentation, with each having a clear role and speaking time.		1	10		
	Audience Engagement	Team engages the audience by maintaining eye contact, speaking with energy, and inviting questions at appropriate times.		1	10		
	Clarity of Delivery	Team speaks clearly and confidently with well-placed delivery that is easy to follow.		1	10		
	Confidence in Responses	Team answers questions with confidence, providing clear and thoughtful responses.		1	10		
	Problem-Solving	Team demonstrates critical thinking, providing solutions or insights when asked challenging or unexpected questions		1	10		
#VALUE!
